Practical - 09

Aim	Design a IoT Smart Office scenario using cisco packet tracer software
Software used	CISCO Packet Tracer
Components required	1. RFID Card 2. RFID Reader 3. Main Door 4. Solar Panel 5. Battery 6. Smart Office Setup 7. Portable Music Player & Bluetooth Speaker 8. Laptop Controller 9. Siren 10. Fire Monitor 11. Fire Sprinkler
Circuit diagram	Theory	The Internet of Things (IoT) is a system of interrelated devices that communicate over a network to collect and exchange data. IoT networks improve automation, efficiency, and remote accessibility in various applications, including smart homes, office networking, industrial automation, and healthcare. This report focuses on a simulated IoT network using Cisco Packet Tracer, demonstrating its structure, components, functionality, and use cases.

	The given network simulation is designed in Cisco Packet Tracer, a network simulation software widely used for network design, testing, and education. Cisco Packet Tracer allows users to create network topologies, configure devices, and simulate their behavior in real-time.
Output	Conclusion	Design of IoT Smart Office scenario using cisco packet tracer software is successfully completed.
